

Fetch Audit — every article, and where it went

The 24 hours to 23:00, 27 Aug 2026 — the window the coverage line counted · 259 articles, each with its score and its disposition

259

fetches in the window

12

sent — were in a delivered
report

93

queued — go out at the
next 05:00

21

held — reference pages &
stale dates

133

excluded — score 0, wrong
subject

Why "fetched 266" and "report 109" are different numbers, precisely: they measure different windows. The coverage line counts everything *fetched* in a rolling 24 hours; the morning report carries everything *published* in the prior calendar day that passed the gates and was not already sent. An article fetched today but published yesterday was in this morning's 109; an article fetched today and published today is queued for tomorrow's 05:00; an article fetched today that is a Reuters briefing item about equities scored 0 and goes to nobody. Every row below states which of those it is — nothing is unaccounted for.

The 133 zeros are a milestone, not a fault. 113 of them are the first articles the newsletter route has ever delivered: the fixed keep-step processed the overnight Reuters briefings (Morning Bid, Trading Day, India File and others) and extracted their headlines — then the scorer correctly zeroed the general-market bulk. Generous extraction, strict scoring: the design working as intended on its first night. The remainder are AFR lifestyle pieces — watches, fashion, travel — correctly scored as carrying no energy, building or climate bearing. All stay in the database and on the dashboard; none reach the client email.
